## 6. 环境条件

### 6.1 Temperature 温度

充电:0°C to +60°C

放电:0°C to +60°C

### 6.2 存储条件:

1. 默认出厂容量在 20%~30%之间, 在 -10°C to +23°C 环境温度, 湿度小于 65%条件下可存储 6 个月。建议充电到 50%~70%容量。
2. 20%~30%容量, 在 -10°C to +45°C 环境温度, 湿度小于 65%条件下可存储 3 个月。
3. 20%~30%容量, 在 -10°C to +60°C 环境温度, 湿度小于 65%条件下可存储 1 个月。
4. 50%~70%容量, 在 -10°C to +23°C 环境温度, 湿度小于 65%条件下可存储 1 年。

如果超出以上条件存储, 电池包电量可能耗尽。当电池包单节电芯电压低于 2V 时, 不建议再使用。

#### Note:

1. 如果要长期存放, 请将电池存放在 <23°C、无腐蚀性气体环境下。
2. 存储时间超过 1 年时, 请至少一年充电一次。建议充电至 50%~70%容量。
3. 电池长期存储时性能衰减。满充容量降低, 内阻增加。且此变化是不可逆的。高温下电池性能衰减更严重。满充容量电芯在 60°C 环境温度下存储 28 天, 电芯容量降低到 89%。充电后恢复到初始容量的 94%。

### 6.3 Humidity 湿度

60%±25%RH 无凝露

### 6.4 Altitude 海拔高度 (气压)

500 hPa to 1060 hPa

## 7. 电池寿命

### 7.1 Battery shelf life 电池存储寿命

当电池在关机模式下储存时, 每年需要做一次完整的放电/充电操作, 以延长储存时间。默认出厂容量在 20%~30%之间, 按照出厂容量在小于 23°C, 湿度小于 65%条件下只能存储 6 个月。如需存储更长时间, 建议在 6 个月内充放电到 50%~70%电量。

### 7.2 Battery cycle life 电池循环寿命

恒流 2.84A 充电到 16.4V, 再恒压充电到电流小于到 260mA 截止。以 3.4A 恒流放电到 12V。电池在 300 次上述充放电循环后, 其初始容量应至少达到电池规格规定的 80%。

## 13. 建议

The following represents a typical, but non-exhaustive, list of good advice to be provided by the manufacturer of secondary cells and batteries to equipment manufacturers and battery assemblers.

- Do not dismantle, open or shred cells. Batteries should be dismantled only by trained personnel. Multi-cell battery cases should be designed so that they can be opened only with the aid of a tool.
- Compartments should be designed to prevent easy access to the batteries by young children.
- Do not short-circuit a cell or battery. Do not store cells or batteries haphazardly in a box or drawer where they may short-circuit each other or be short-circuited by conductive materials.
- Do not remove a cell or battery from its original packaging until required for use.
- Do not expose cells or batteries to heat or fire. Avoid storage in direct sunlight.

- b) Keep batteries out of the reach of children

Battery usage by children should be supervised. Especially keep small batteries out of reach of small children.

- c) Seek medical advice immediately if a cell or a battery has been swallowed.
- d) Do not expose cells or batteries to heat or fire. Avoid storage in direct sunlight.
- e) Do not short-circuit a cell or a battery. Do not store cells or batteries haphazardly in a box or drawer where they may short-circuit each other or be short-circuited by other metal objects.
- f) Do not remove a cell or battery from its original packaging until required for use.
- g) Do not subject cells or batteries to mechanical shock.
- h) In the event of a cell leaking, do not allow the liquid to come in contact with the skin or eyes. If contact has been made, wash the affected area with copious amounts of water and seek medical advice.
- i) Do not use any charger other than that specifically provided for use with the equipment.
- j) Observe the plus (+) and minus (–) marks on the cell, battery and equipment and ensure correct use.
- k) Do not use any cell or battery which is not designed for use with the equipment.
- l) Do not mix cells of different manufacture, capacity, size or type within a device.
- m) Always purchase the battery recommended by the device manufacturer for the equipment.
- n) Keep cells and batteries clean and dry.
- o) Wipe the cell or battery terminals with a clean dry cloth if they become dirty.
- p) Secondary cells and batteries need to be charged before use. Always use the correct charger and refer to the manufacturer's instructions or equipment manual for proper charging instructions.
- q) Do not leave a battery on prolonged charge when not in use.
- r) After extended periods of storage, it may be necessary to charge and discharge the cells or batteries several times to obtain maximum performance.
- s) Retain the original product literature for future reference.
- t) Use the cell or battery only in the application for which it was intended.
- u) When possible, remove the battery from the equipment when not in use.
- v) Dispose of properly.
